

**Connecting the Electrical Supply**  
The electrical supply must be 120 volt, 60 Hz, 12 ampere, properly grounded. Connect with copper wire only.

English

**WARNING**

**ELECTRICAL SHOCK HAZARD**

- DISCONNECT ELECTRICAL POWER AT THE CIRCUIT BREAKER BOX OR FUSE BOX BEFORE INSTALLING THE DISHWASHER.
- ELECTRICALLY GROUND DISHWASHER.
- USE COPPER CONDUCTORS ONLY. FAILURE TO FOLLOW THESE INSTRUCTIONS COULD RESULT IN SERIOUS INJURY OR DEATH.

**Grounding Instructions**

This appliance must be connected to a grounded metal permanent wiring system, or an equipment grounding conductor must be run with the circuit conductors and connected to the equipment grounding terminal or lead on the dishwasher. The dishwasher must be properly grounded before operating. Make sure that the dishwasher is connected to a suitable ground in compliance with the NATIONAL ELECTRICAL CODE, in the United States, or the CANADIAN ELECTRIC CODE C22.1-latest edition, in Canada as well as any provincial/state or municipal or local codes that apply.

Figure 16.

After completing wiring and testing, be sure that wires are pressed back into the terminal box and then securely fasten the terminal box cover/door panel in place using screws from accessory package. See Figures 2 and 17.

Figure 17.

**Panel Installation, SHI Models**

If you have an SHI model, an integrated model, you will have additional mounting hardware and a folded template sheet with installation instructions comprised of pictograms.

In North America the black, white and stainless steel models of the integrated series (SHI series), have a control panel that is 5-5/16" (135 mm) tall. The black and white models come with a standard extension piece, and stainless steel models come with two extension pieces, dimension "A" in figure 18 and table 1, below. The stainless steel model comes with two extension pieces, referred to as the standard and long extension piece in Table 1: the standard piece is used for drawer heights up to 6" (152mm), the long extension piece is used for drawer heights greater than 6" (152mm) but 6-7/16" (164mm) or less. These stainless steel extension pieces are not installed in the control panel. Rather the stainless steel models slip the two extension pieces loose and must be inserted as shown in pictogram 5 on the template sheet.

The purpose of the extension piece is to allow the increase of the control panel height to try to match the horizontal drawer line of the cabinets. If your drawers are taller than the "C" dimension shown on Table 1 it is recommended that the extension either be slid in as far as it will go, or removed and the door made to fit directly below the control panel.
